TO SECURE MANDATORY LABELING AND A FIVE YEAR MORATORIUM ON ALL GENETICALLY ENGINEERED FOODS

SUBMITTED TO THE PRESIDENT OF THE UNITED STATES, CONGRESS, USDA AND FDA

New substances are being introduced into our foods via a technology called genetic engineering. A growing number of scientists and physicians are voicing concern over the possible health and environmental risks from these foods. Current laws and policies do not require labeling or adequate safety testing of these new genetically engineered foods. This petition upholds the right of consumers to have the knowledge to make informed choices about the foods they eat and feed their families - and will monitor the safe unfoldment of genetically engineered organisms into our food chain.

We, the undersigned, as citizens of the United States of America, strongly urge the passage of legislation and policies to mandate the clear and accurate labeling of all foods derived from, processed with, containing or consisting of genetically engineered organisms or agricultural application which affects the food supply - and a minimum five year moratorium on the release of any further genetically engineered organisms into all levels of our foods chain (from seed to processing to table) until adequate safety protocols can be put in place to assess their risk to our health and the environment.
